**RG2i**
Groupe 2AR

iMonnit is a powerful platform for analyzing the data from your sensors and setting text, email, or voice alerts.

Cloud-based and on-prem solutions are available in four iMonnit flavors.

FOUR WAYS TO KEEP AN EYE ON THE THINGS THAT MATTER MOST. FROM ANYWHERE.

CLOUD SOLUTIONS

iMONNIT BASIC

iMonnit Basic is included for free with all wireless sensors, providing basic features for you to configure and monitor your sensors online or via mobile app.

iMONNIT PREMIERE

iMonnit Premiere provides all of the benefits of Basic but with enhanced sensor functionality and software features—all at a low annual cost.

ON-PREM SOLUTIONS

iMONNIT EXPRESS

iMonnit Express is a stand-alone PC application. An alternative to online monitoring, it doesn't require internet. This is ideal for smaller sensor networks using on-screen and email notifications for alerts.

iMONNIT ENTERPRISE

iMonnit Enterprise provides most of the features of Premiere, but allows the organization to host and maintain their own sensor data. This is ideal for large organizations with exacting data needs.
